Crema de hidrocortisona 2.5% — cómo usarla

Lo que vemos parece un brote de eczema en los antebrazos. La piel está irritada, pero se controla bien con cuidado diario.

Aplique una capa fina de la crema en las zonas afectadas **dos veces al día, por 7 días**. Luego deténgase. No la use en la cara ni cerca de los ojos.

Use jabón y crema humectante sin fragancia todos los días, incluso cuando la piel esté mejor.

Sobre la lactancia: este tipo de crema se usa habitualmente durante la lactancia, pero **su médico debe confirmarlo con usted antes de empezar**. No la aplique en el pecho.

Llame a la clínica si la piel empeora, aparece pus o fiebre, o si no mejora en 2 semanas
